

8/28/2012

Incident:
Juneberry road fire

Date:
08/28/2012

Shift:
Day 0700- 1930

SAFETY MESSAGE

SAFETY IS OUR FIRST PRIORITY

Fire fighter safety comes first on every fire, every time

SAFETY THOUGHT

75% of Americans are chronically dehydrated. At 2% dehydration, performance will fall off by 10-20% and is the #1 trigger of daytime fatigue.

MAJOR HAZARDS AND RISKS

- Snags
- Burning Peat Pockets
- A LOT of Heavy Equipment

- Bees and Bee Stings
- Driving
- Dehydration

- Communications
- Hazardous Materials
- Structure Protection

INDICATORS OF EXTREME FIRE BEHAVIOR

Whenever any of these indicators are observed on a wildland fire operation- **WATCHOUT**

- A rapid increase in the fire's intensity
- High, sustained rate of spread
- Well-developed convection column
- Long-distance spotting (over 600 feet)
- Fire whirlwinds or horizontal flame sheeting
- Sudden calming of the wind

COMMON DENOMINATORS OF FIRE BEHAVIOR ON TRAGEDY FIRES

- Most incidents happen on smaller fires or isolated portions of larger fires.
- Fires respond quickly to shifts in wind direction or wind speed.
- Flare-ups generally occur in deceptively light fuels.
- Fires run uphill surprisingly fast in chimneys, gullies, and on steep slopes.
- Helicopters and air tankers, can adversely affect fire behavior. The blasts of air from low flying helicopters and air tankers have been known to cause flare-ups and cause weak trees to fall.

DANGER!

High rates of spread can cause entrapment, injury, and death.
Remain **within** 5 minutes of identified escape routes and safety zones at all times.

Aultman IMT2

Incident Objectives	1. Incident Name <i>Juneberry Road Fire</i>	2. Date Prepared <i>8/27/2012</i>	3. Time Prepared <i>1830</i>
4. Operational Period (Date and Time) <i>August 28, 2012 0700 - 1930</i>			
5. General Control Objectives for the Incident (include Alternatives)			
<i>Ensure firefighter and public safety. Review the 10 Standard Firefighting Orders and 18 Watch Out Situations by all line supervisors.</i>			
<i>Protect all structures within the fire perimeter or adjacent to the fire.</i>			
<i>Secure all control lines and one hundred percent mop-up of peat on the Juneberry Road Fire.</i>			
<i>Rehab all dozer lines and level areas after extinguishment.</i>			
<i>Support local initial attack of wildfires and assume command of extended attack incidents as requested by the Warroad area forestry fire staff.</i>			
6. Weather Forecast for Operational Period			
SKY/WEATHER.....MOSTLY SUNNY. MAX TEMPERATURE.....85-90. 24 HR TREND.....9 DEGREES WARMER. MIN HUMIDITY.....33-38 PERCENT. 24 HR TREND.....7 PERCENT LOWER. 20-FOOT WINDS.....SOUTHEAST WINDS 5 TO 10 MPH. LAL.....1.PRECIPITATION.....NONE. HOURS OF SUNSHINE...10. HAINES INDEX.....5 (MODERATE). SMOKE DISPERSAL.....GOOD (AROUND 32600 KNOT-FT). MIXING HEIGHT.....AROUND 5800 FT AGL. TRANSPORT WINDS.....SOUTHEAST AROUND 10 MPH.			
7. General Safety Message			
<i>Review the medical plan for bee sting treatment and evacuation procedures.</i>

John Bajda				Mike Hanson				

Medical Plan Attachment C – Evacuation/ Transport Plan

General Information:

- Communicate all injuries/illnesses, as outlined in the ICS 206 Block 8.
- Use 911 for Emergency medical response and transport for injuries/illnesses.
Note: incident ambulance can be used for patient transport if needed.
- Notify direct supervisor of any injury or illness.
- Contact closest available medically trained personnel.
- On-site incident personnel will move ill or injured patient to the nearest road, for transport by incident ambulance.
- Request additional equipment or supplies needed to move patient.
- Notify incident ambulance of patient pick-up point.
- Incident personnel with medical training (if available) should accompany patients during the move until transferred to ground or air ambulance personnel.
- Medically trained resources are identified in the IAP (see ICS 204, Division Assignment List).

Time frame from ICP to Fire Line is approximately 15 minutes by ground.

Time frame from DIV A or DIV Z to road access by Ambulance should be less than 15 minutes from almost any point on the fire. If patient is ambulatory, a tracked vehicle can bring patient to an accessible road.

Transport time to nearest hospital (Roseau) is approximately 30 minutes by ground.

Because of the dusty road, the landing zone (LZ) for an Air ambulance is the Juneberry road asphalt area on the North West end of the fire on county road 7; GPS coordinates: Lat. 48.849 N Long. 96.300 W. For a serious injury, where ALS is needed, an air ambulance should be called.

If extrication is needed, contact the Roseau County Sheriff dispatch for specific rescue needs through 911.

In case of any wasp/hornet sting.

Contact immediate supervisor and DIVS and immediately get stung firefighter to a road where the ambulance personnel can evaluate the firefighter.

If patient is not ambulatory or is deteriorating, contact the ambulance and have the EMT's bring a back board (and epi-pen) to the firefighter. An air ambulance should be called immediately if the patient is having breathing difficulty. EMT's can be transported by ATV or tracked vehicle. DIVS arrange for a tracked vehicle or a group of firefighters to carry the patient to the road. Ambulance will treat and transport as needed.

A back-up ambulance will be called if the incident ambulance transports the patient.

Bee and Wasp Stings

Bees & Wasps can cause a severe allergic reaction (Anaphylactic Shock) in some people if bitten or stung. Allergic reactions to bee and wasp stings can develop anywhere on the body and may include non-life-threatening reactions such as hives, swelling, nausea, vomiting, abdominal cramps, and headaches. Life-threatening reactions such as Anaphylactic Shock, dizziness, unconsciousness, difficulty in breathing, swelling of the hands, face & extremities, nausea & vomiting, and in some cases a feeling of impending doom, and laryngeal blockage resulting from swelling in the throat require immediate medical care. Symptoms can begin immediately following the sting or up to 30 minutes later and may last for hours.

Most of the time, yellow jacket stings will amount to nothing more than a slight discomfort for a short period. However, there will always be the chance it will be far more serious. Being prepared and aware of the potential problem is the key to eliminating deaths caused by severe allergic reaction. Almost anyone can have an allergic reaction; especially a highly fatigued firefighter or a person who had a previous sting and has produced anti-bodies that could result in allergies.

Prevention

- Patients susceptible to bee stings and or have had Anaphylactic Shock in the past, should carry a bee sting kit.
- If you start to feel an allergic reaction coming on, contact the Medical Unit Leader immediately.
- Oral and topical antihistamines should help prevent or reduce the itching and swelling. Try not to rub or scratch the sting site, because microbes from the surface of the skin could be introduced into the wound and result in an infection.
- Bees and wasps can be attracted to, or may react to, odors in the environment. Avoid using perfume, cologne, lotion, or scented soaps—any of these can attract wasps.
- If you remain calm when a bee or wasp lands on your skin to inspect a smell or to get water if you are sweating heavily, the insect will eventually leave of its own accord. If you don't want to wait for it to leave, gently and slowly brush it away with a piece of paper.
- Stinging incidents often occur when nesting areas of social insects are disturbed. Be observant of the area around you. If you see insects flying to and from a particular place, avoid it.
- Most insect repellants are not effective against wasps.
- When eating meals where wasps are active, place a small amount of anything containing sugar where it can easily be reached just outside the eating area.
